

Welcome,

we are **ready2plugin** and a proud winner of “The smarter E Award”, category “Smart Renewable Energy” 2018.

On our press page ready2plugin.com/press you will find information about our product, our startup and our background and how to contact us. We would be happy to support your work – don’t hesitate to get in touch with us.

Key Facts

About ready2plugin

Ready2plugin is a predictive algorithm.

By ensuring the permissible current load in the home circuit the algorithm **allows easy and safe plug & play** into sockets without an electrician. It works for generators and storage systems up to 1800 watts.

Founded 2018 in Berlin.

At the moment we are scouting for financial and strategic partners for our Series A in autumn 2018, shipping our pre-orders in spring 2019.

Background

Ready2plugin is an **invention of Marcus Vietzke**. He is one of the leading experts on pluggable power generating devices and founded his first company “indielux” in 2014, a company for plug-in power solar devices.

Indielux advises manufacturers, retailers, the energy and housing industry to the market introduction of plug-in photovoltaic devices and develops prototypes according to customer requirements. Through the network, indielux offers access to relevant preliminary products and supplement these with its own innovative developments for instance a tool-free balcony mount.

Founder Team

Marcus Vietzke
CEO

Stephan Luckow
CTO

Stefan Ulfert
CMO

ready2plugin

“We want to enable everyone to join the energy revolution.”

Therefore we invented a plug & play solution.
